**Description**

Line of 5 ND filter with gradient (soft or hard) transition from clear to dedicated ND value in one stop steps. Brings an overly bright part of a scene into the dynamic range of film or sensor.

Soft-edge filters with wider gradient transitions are ideal for use with short to midrange focal length lenses. Ideally suited for situations involving both bright and dark areas.

**Key Feature**

- Traditional Dyed Absorptive NDs
- Balance exposure within a scene
- Available in 4 stops from 0.3 – 1.2
- Soft edge

**Application**

By reducing the exposure in selective areas, you can balance the overall exposure of the scene to gain detail in both bright and dark areas. Such as an open sky and shadowed foreground. Hard edged for long focal length and soft edged for short and mid-range focal length lenses.

**Sizes Plates**

4x4", 4x5.65"

**Thickness Plates**

4 mm
